Summary

Enthusiastic and detail-oriented B.Tech CSE student, 2026 passout, with hands-on internship experience in Python backend development. Skilled in building and debugging web applications using Django, Python, MySQL, and REST APIs. Strong understanding of object-oriented programming, modules, packages, multi-threading, and user authentication. Familiar with HTML, CSS, JSON, Git/GitHub, and comfortable working in tools like PyCharm, Atom, and Sublime. Quick learner with good problem-solving and debugging skills, eager to contribute to real-world backend development projects.

Work Experience

Python Backend Developer Intern (Virtual) – ENut Technologies Private Ltd Feb 2026 – Apr 2026

- Contributed to backend application development using Python, Django, and Django REST Framework, focusing on API development, debugging, and server-side logic implementation.
- Worked with relational databases such as MySQL/SQLite to perform database operations, schema management, and CRUD functionality integration.

Projects

Health Care API APP

[Link to Demo](#)

- Engineered a Healthcare Management Web Application using Python, Django, Django REST Framework, HTML, Bootstrap, and SQLite, enabling management of doctors, patients, and appointment details.
- Designed and implemented RESTful APIs for healthcare data operations, including CRUD functionalities for doctor and patient records, improving backend data accessibility and modularity.
- Created responsive frontend templates with Bootstrap and integrated them with Django backend for seamless user interaction, API consumption, and database-driven workflows.

Employee Management System

[Link to Demo](#)

- Developed an Employee Management System using Python, Django, MySQL, HTML, CSS, and Bootstrap to manage employee records, department details, and organizational data through dynamic web interfaces.
- Implemented core functionalities including CRUD operations, form handling, database integration, template rendering, authentication workflows, and URL routing to streamline employee data management.
- Designed backend architecture using Django models, views, templates, and MySQL database connectivity, improving practical knowledge of full-stack web development and scalable application design.

Education

2022 – 2026 B.Tech CSE, **SRM University, AP**

Skills

Programming & CS Fundamentals	Python
Frontend Technologies	HTML, CSS
Web Development	Django, Django Rest Framework
Database Management	MySQL, SQLITE3
Vesrsion Control	Git, GitHub
Core Strengths	Clear communication, adaptability, quick learner
